The paper deals with the frequency of tense-aspect forms in British English for justifying the selection of language phenomena from the linguistic point of view. This approach is applied through educational process at universities. Moreover, communicative oriented approach to language education should be based on this selection. It presupposes educational orientation to real communicative situations. Based on analyzing corpus data from the British National Corpus all tense-aspect forms can be divided into four groups: rare, occasional, frequent and constant. The authors have made the algorithm for learning tense-aspect forms in British English based on the frequency of these forms.

**Keywords:** communicative approach, foreign language training, grammar training, British National Corpus, tense-aspect forms
